PROFESSIONAL SUMMARY

Renewable energy analytics professional with 3+ years of experience spanning virtual PPA procurement and portfolio management, energy forecasting, settlement reconciliation, REC management, and utility green tariffs. I scale AI adoption company-wide and build automated workflows for RE project performance monitoring and financial reporting.

PROFESSIONAL EXPERIENCE

ERM Coho | Senior Analyst, Climate & Sustainability | Sep 2023 – Present

- Manage 3 operating PPA portfolios (13+ projects), tracking and analyzing project costs, generation, availability, and profitability
    - Built and deployed AI/Power Automate workflows to extract complex energy invoice data and generate standardized project- and portfolio-level settlement and performance reports; 50+ reports produced, saving ~4 hours per report
    - Generate project and portfolio forecasts based on wholesale forwards data, settlement structures, developer generation forecasts, and assumptions based on historical data; 70+ forecasts generated
    - Use and adapt Power Query and Excel tools to audit energy invoices against historical settlement data and audited availability reports; 200+ invoices and reports audited
    - Work directly with developers and meter agents to investigate charges and resolve discrepancies
    - Advise clients on project performance details and settlement mechanics to support their internal finance and accounting reporting; 50+ ad hoc requests fulfilled
- Assess and procure renewable energy solutions (PPAs, RECs, Utility Green Tariffs, Community Solar)
    - Develop and implement renewable energy strategies, from baselining through contracting, aligned to clients' financial and sustainability goals; 7+ engagements delivered
    - Own and manage ERM Coho's firm-wide Excel/VBA "PPA model", assessing 200+ North American projects quarterly across 8+ scenarios using developer bid data, wholesale prices, and contract terms
    - Work with utilities to understand green tariff and community solar program specifics and negotiate agreements (surveyed 100+ utility green tariffs globally, often using AI to expedite research)
    - Model renewable portfolios hourly; have built 15+ 8,760-hour models integrating load, generation, contracts, RECs, and tariffs; securing > 3 GWh/year of renewables and ~$20M in REC arbitrage
- Create and scale AI solutions across ERM Coho as part of the AI Team
    - Translate emerging AI technologies and ERM AI policies into adoption guidance; created and led "AI at Work" training to accelerate responsible and effective use of AI company-wide
    - Built an AI and Power Automate workflow to monitor regulatory changes affecting commodity trading advisor registration requirements for VPPA advisory in Europe, Middle East, and Asia
    - Automated project resourcing forecasts with the finance team by integrating Salesforce data with existing project planning templates, streamlining forecasting workflows for engagement managers
    - Built and manage a firm-wide AI Copilot agent to streamline internal Coho knowledge research
    - Host weekly "AI Office Hours" to help colleagues build and scale their own AI workflows and tools

Seattle Public Utilities | Water Resources Intern | Jun 2022 – May 2023

- Built 1–10-day utility water demand forecasts with regression, random forests and neural networks; developed a Python/Plotly Dash app integrating weather and demand APIs to automate forecasting and planning analysis

HHMI Janelia Research Campus | Neuroscience Data Analyst | Oct 2018 – Jun 2021

- Analyzed 138,000 neurons and 50 million synapses using Python and SQL; built 15+ weighted connectivity matrices to synthesize neural connectivity and presented findings to research teams and C-suite leadership

NASA Jet Propulsion Laboratory | Atmospheric Data Analyst | May 2017 – May 2018

- Reconstructed and validated measurement models from 8+ fragmented Excel workbooks; presented quantitative research findings on how the refractive index of air varies with humidity

EDUCATION

University of Washington | Master of Science in Environmental Engineering | 2023 | GPA 3.97

Pomona College | Bachelor's in Physics & Philosophy | 2018 | GPA 3.8 | Sigma Xi Research Award

SKILLS

Excel, VBA, Python, SQL, APIs, GitHub, Power Automate, Power Query, Power BI, Plotly Dash, Muse, M365 Copilot, ChatGPT, Claude, prompt engineering, settlement reconciliation, generation and availability audits, VPPA/PPA economics, green tariffs, RECs and registries; Commodities Trading Certified, fluent in French, intermediate in Spanish
